RESEARCH INTERESTS

My research interests lie in Human-Computer Interaction, with a focus on creativity-support tools. I study how interactive systems support open-ended creative processes, particularly in collage-based storytelling, where ideas evolve through iterative exploration and serendipitous discovery. My work focuses on designing AI-assisted systems that help users retrieve, reinterpret, and repurpose personal photo collections for creative expression. Building on creative expression as a form of reflection and meaning-making, I am interested in how AI can support reflective and accessible creative practices, especially therapeutic art-making.
